

Session 5: Next Steps

What do we do after the unpacking of PRSCS?

Presented to the PICS panel members (NMHS)

18 October, 2026 | Lamana Hotel, Port Moresby/PNG

Philip Malsale/Senior Climatologist/SPREP

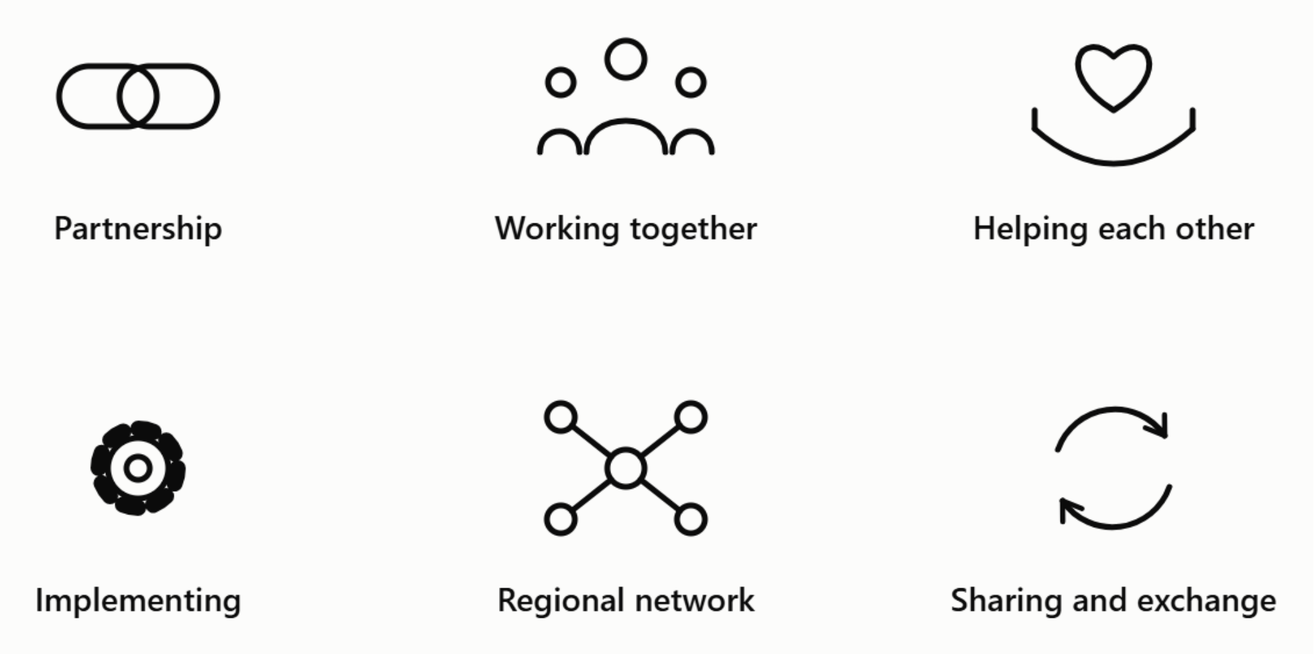

TITLE: Next Steps

Goal - This session will provide information on the next steps and how the mapping exercise will be used to leverage new Climate Services projects to support the unsupported priorities of NMHSs outlined in the Pacific Roadmap for Strengthened Climate Services.

Aim: This is to provide series of activities in the next few months leading to the New Regional Climate project (2028 - 2033)

Word of appreciation

- Thank all for the efforts put together to unpack the climate roadmap. Helping each other to ensure all activities are capture in our workplan
- Partnership - We can implement roadmap only if we work together with donors and regional partners.
- Sharing and exchange of lesson learn will motivate NMHS to be better
- We implement in our NMHS but we are building a better climate services in our region

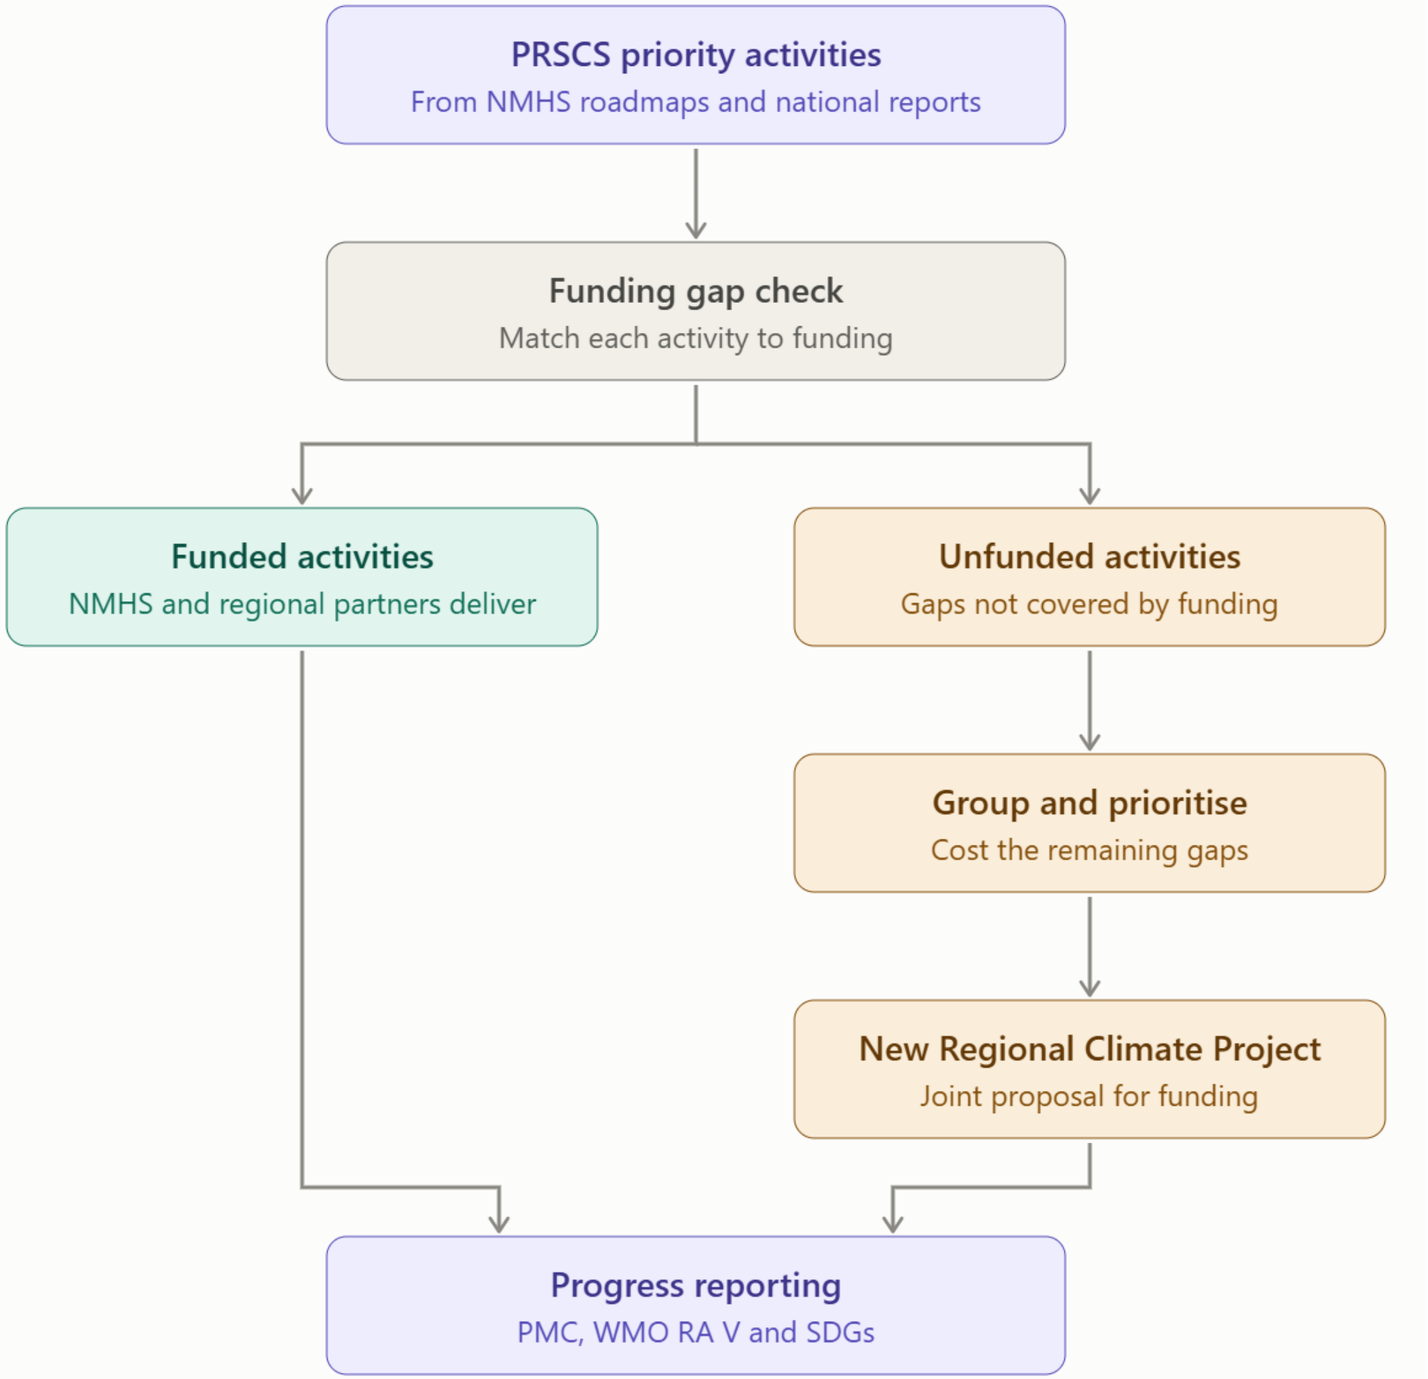

Next steps

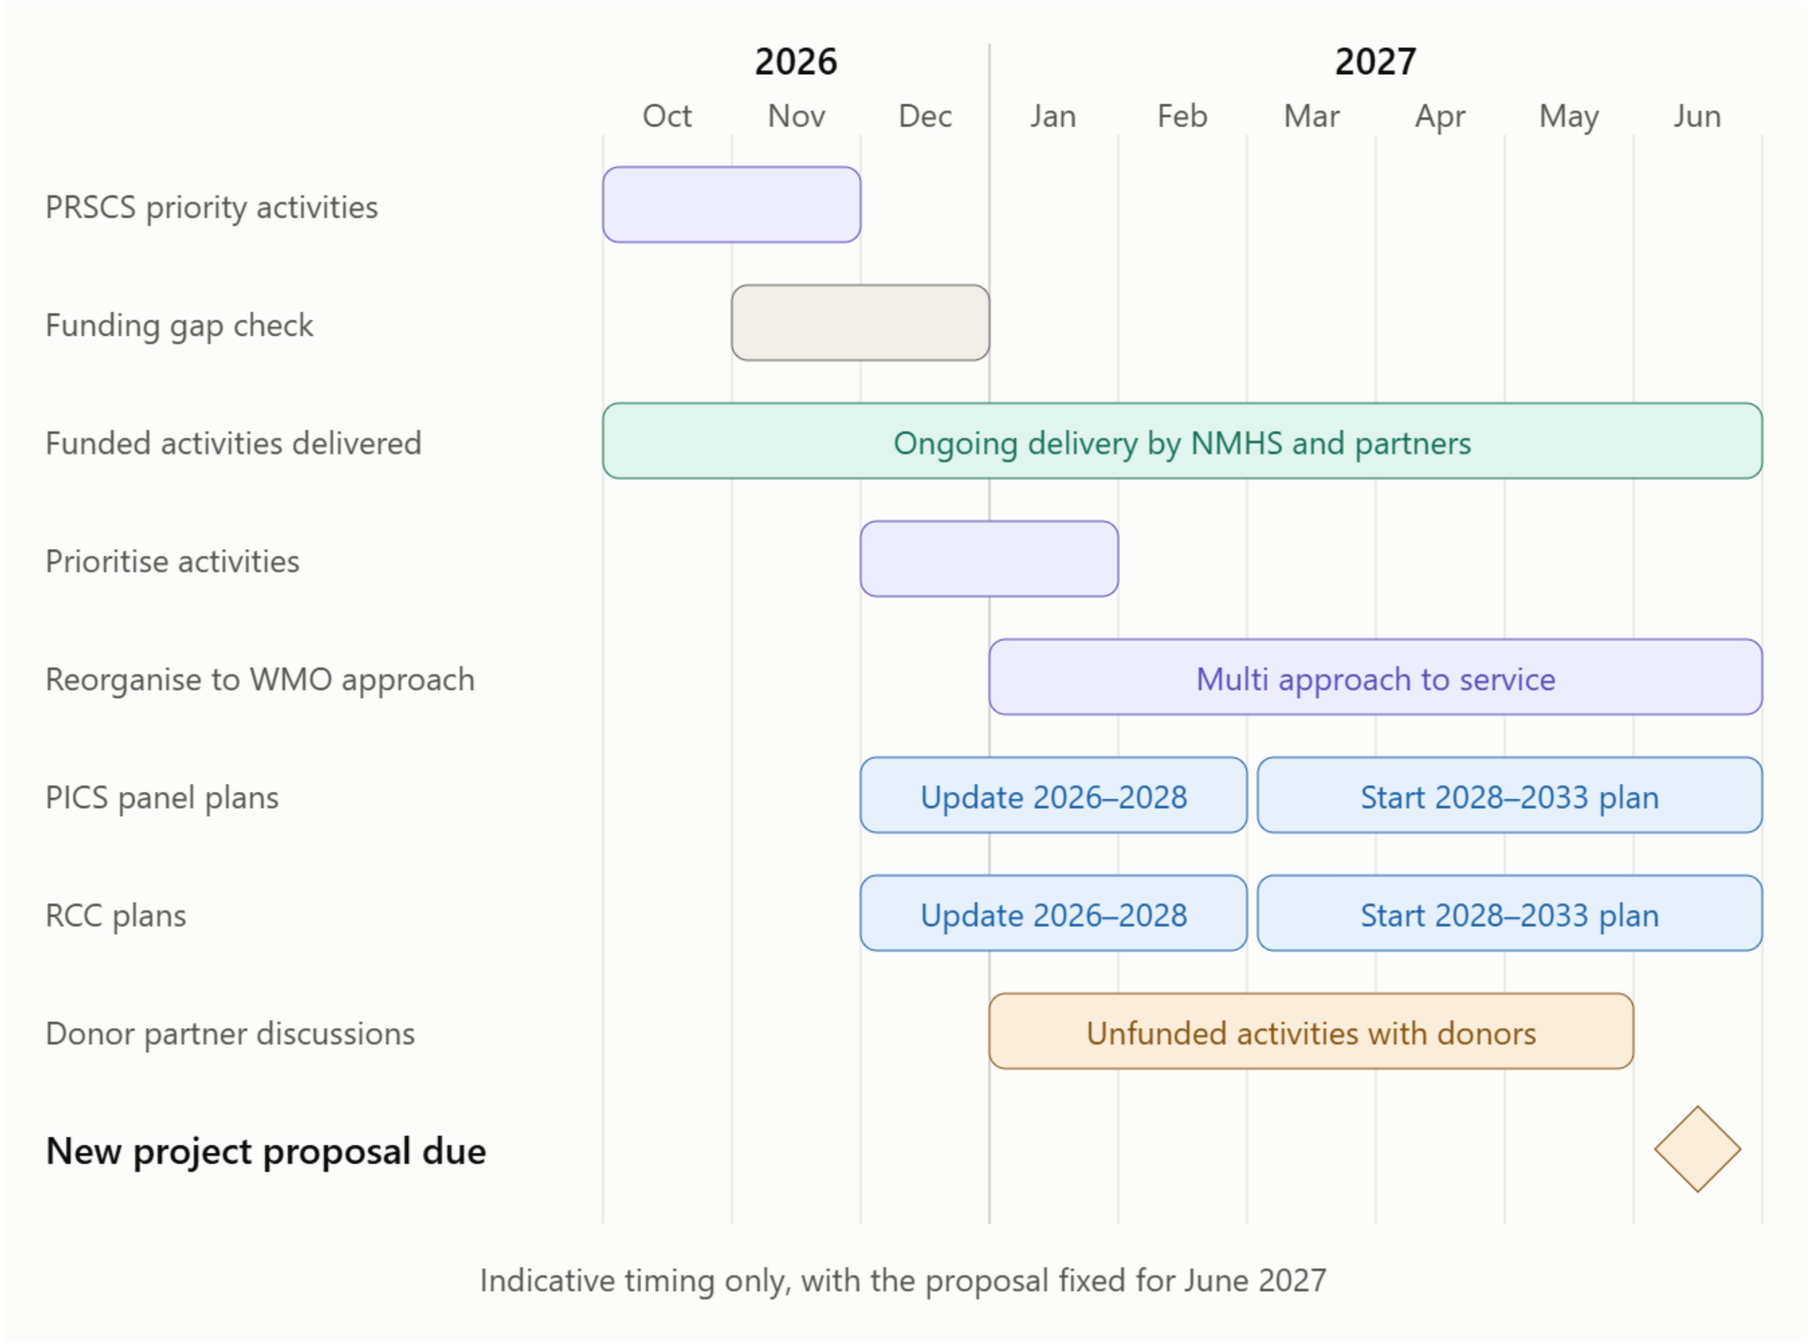

PICS, RCC Secretariat and NMHS will collate all the activities/plans we discussed today and update the following

1. **Secretariat** will **prioritise** the regional activities
2. **NMHS** will **incorporate their activities into their NMHS annual plans**/ **Review and Update your climate frameworks**
3. Secretariat will **update 2026-2028 PICS panel plan** to include new activities under the PRSCS and start develop 2028 -2033 PICS panel plan
4. Secretariat will **update the RCC 2026-2028 plan** to include new activities under the PRSCS and start develop 2028 -2033 RCC plan
5. Any **unfunded climate activities** that we identified in our plans will be discuss together our donor partners to work **new regional Climate project** – This can form the activities for COSPPac 4 or any new project.
6. We ensure that we also need **to reorganise ourself to reflect what WMO current approach**– A multi approach to service
7. With the approach that we are taking, we can better measure our project over time and know how each NMHS is progressing in the climate space. We can have a better prediction of how NMHS can move to the different levels of climate services under WMO than before
